

# OTOFLUSH®

## Active Constituents:

2.0 g/L Poly(hexamethylene) biguanidine hydrochloride

1.2 g/L Disodium edetate

## LABEL NAME:

Dermcare Otoflush®

## SIGNAL HEADINGS:

KEEP OUT OF REACH OF CHILDREN

READ SAFETY DIRECTIONS BEFORE OPENING OR USING

FOR ANIMAL TREATMENT ONLY

## CLAIMS:

For use only by or under supervision of a registered veterinarian.

Neutral buffered pre-treatment ear flush solution to clean and reduce microbial numbers in ears of dogs and as a pre-treatment to improve the penetration of and increase bacterial susceptibility to antimicrobial preparations used to treat Canine Otitis Externa.

## DIRECTIONS FOR USE:

### Dosage and Administration:

**For at home use:** Remove the cap of the flush nozzle. Insert the nozzle just into the ear canal opening and squeeze to fill the ear canal (approximately 0.5ml for small breeds or 1.5ml for larger breeds) with Dermcare Otoflush®. Gently massage the ear then allow the dog to shake its head to remove debris and excess Dermcare Otoflush® liquid from the ear. Repeat this process until the Dermcare Otoflush® liquid coming out of the ear is clean. Wipe off any debris and excess liquid from the ear and ear opening. Remove any adherent ear exudate from the flush nozzle before replacing the cap. For routine ear cleaning repeat this procedure once weekly only. For use in conjunction with an antibiotic ear treatment repeat the procedure twice daily for a maximum of one week or as directed by a veterinary surgeon. Ears should be flushed and excess Dermcare Otoflush® removed prior to antibiotic use. Extended daily usage can result in tissue overhydration and may retard healing of the tympanic membrane. Prolonged therapy should be monitored by a veterinarian.

### GENERAL DIRECTIONS:

In the presence of an active infection, Dermcare Otoflush® must be used in conjunction with an antibiotic treatment.

May be used under the direction of a registered veterinarian in cases of Canine Otitis Externa where the ear drum is ruptured. Where possible, determine ear drum status prior to use, and appropriately treat for Otitis Media if required. Monitor response to treatment via clinical examination, otoscopy and cytology regularly.

**For in clinic use:** Can be used as an irrigation solution for clinical ear cleaning and flushing procedures.

### SAFETY DIRECTIONS:

Wash hands after use.

**NOTE:** These are the **Australian** label particulars only. If you're in another country, you should check your product label in case of differences in the local labelling requirements.

**FIRST AID:**

First aid is not generally required. If in doubt, contact a Poisons Information Centre (e.g. phone Australia 13 11 26) or a doctor.

**DISPOSAL:**

Dispose of empty container by wrapping in paper and putting in garbage.

**STORAGE:**

Store below 30°C (Room Temperature). Store upright in a dry, safe place.
